## Detailed Steps To Changing The Hosting For Your Domain To Your New Server

Step 1: You had previously purchased a new domain from [Namecheap](#) and a new server from [HostJill](#). Now it's time to link your domain with your new server.
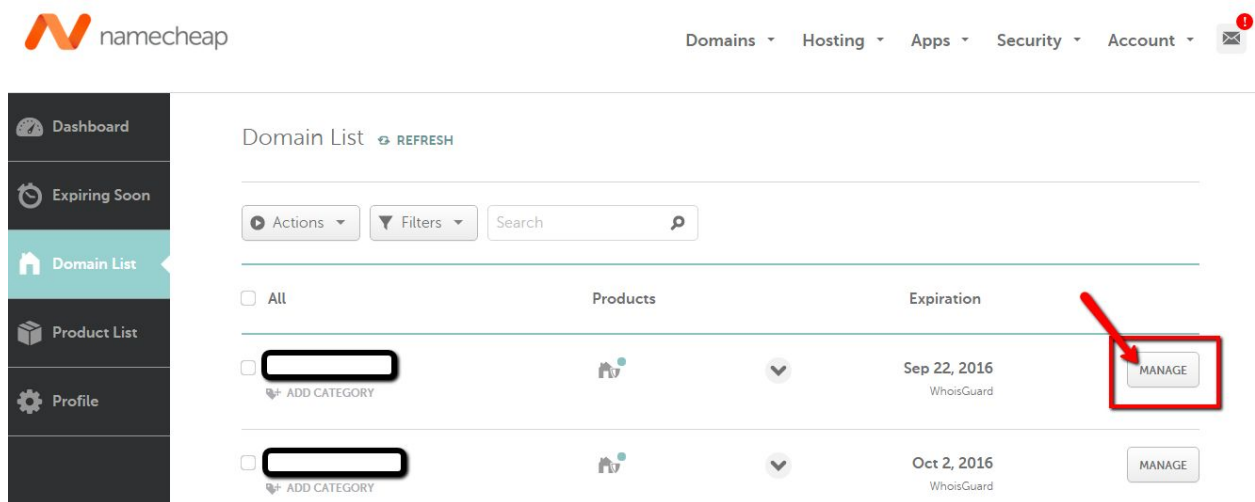

Click [HERE](#) to head back over to [Namecheap](#) and enter your login and password details at the top and click on "**Sign In**"

You'll be taken to your Namecheap dashboard. On the left of your screen, click on "Domain List"

Step 2: You'll arrive at this page as shown below. At this point, you probably only have 1 domain, so click on "Manage" next to it.

Step 3: You'll see your domain details. Go to "Nameservers" and click on "Custom DNS" in the drop down menu.

Step 4: In the two lines, type in "ns1.hostjill.com" and "ns2.hostjill.com" respectively, as shown below.

When you're done, click on the green check mark on the right.

You should see a message saying that your nameservers were updated successfully.

NOTE: It can take up to 24-48 hours for your domain name to be linked to your hosting servers. Once linked, you may proceed to the next step of the pre training.
